

The locking system
with an App

blueCompact

Simple. Flexible. Smart.

With blueCompact, your smart home begins at the front door. Electronic locking systems offer a number of advantages, allowing you to make configurations that are more individual, more flexible, and simpler – even at a later time. You are also given complete control and an overview of the entire locking system.

blueCompact is ideal for smart homes and small businesses alike. Discover all the benefits of electronic locking systems with the latest product highlight from Winkhaus.

Enable, block, manage.

The entire locking system is managed easily via an app. If a key is lost, it can be blocked with just a few clicks via your smartphone or tablet. So, in just a few minutes, you can be certain that anyone trying to access your premises with this key will be met by a locked door. It is also practically impossible for unauthorised persons to copy the key.

Of course you can also reactivate the key should you happen to find it again.

Everything at a glance

The app provides you with a clear overview and shows exactly which key has accessed which room and at which time. This gives you the possibility of checking how well office hours are kept.

This is optimal for time recording measures in businesses or even in private use, e.g. to check whether your daughter came home last night at the agreed time.

Control, no matter where you are.

The blueCompact system, in which every last detail has been considered, also offers a solution if a locking authorisation should be issued remotely. For instance, you can leave an extra empty active key with a neighbour, who can then use it in case of an emergency. Of course, this is only possible if you remotely activate the key via the app, in conjunction with your master key.

This can take place up to one month in advance and grants an authorisation to open specific doors for a defined time.

No data in the cloud

In times when resourceful people pursue criminal activities and take aim at the data cloud, alternative methods must be found for protecting information. blueCompact has the answer: none of the data for your locking system requiring protection is stored in the cloud or on your mobile terminal device, but is kept safely on the master key instead.

This means that, even if you lose your smartphone, anyone who finds it cannot gain access to the building.

A system which gives you room to grow

blueCompact will impress you with its technological capabilities and user-friendly components. In particular, the cylinders are the same shape as conventional locking cylinders, so they can be easily installed without the need to call in a technician.

If you should choose to expand your workplace or extend your home, you can also adapt your locking system to accommodate the new circumstances. blueCompact can be expanded to up to 99 keys and 25 cylinders.

Creating and managing time profiles

Creating time profiles enables you to react flexibly. The locking authorisations for each key can be configured individually as required (including remotely), e.g. for specific days or defined periods of time. This function can be a major advantage: It makes it possible to control the times at which cleaning staff, club members or employees can access which rooms.

The clear display of the locking plan in the blueCompact app enables intuitive operation.

Tasks flexibly programmable

Now you can integrate motorised doors, gates or barriers, indoors or outdoors, easily in your locking system – the new blueCompact wall reader makes it possible. With its clever features, you will have even more design freedom for access control on your premises:

The assignment of locking times, manual or automatic permanent releases, or key authorisations can be programmed individually for each reader and are communicated securely via an encrypted data line.

An overview of blueCompact

Start a smarter life and discover the versatility of this unique locking system.

blueCompact offers you:

- + Convenience: manage your system easily using the app
- + Flexibility: lost keys can be blocked at the flick of a switch
- + More control: all locking events can be closely monitored
- + Remote access: locking authorisations can be issued remotely
- + Security: data is only stored on the masterkey
- + Ease of use: every step is explained via video instruction
- + Practicality: easy installation and flexible expansion

blueCompact components:

Masterkey

Cylinders

Reader

Keys, available in 5 colours

Active key

blueCompact in comparison

When blueCompact is compared with traditional mechanical locking systems, it quickly becomes clear that convenience and user-friendliness go hand in hand with security and long-term savings.
